FIREWALL PRACTICE SHEET - 10 CONCEPTUAL Q&A

10 conceptual Q&A Networking

TOTAL: 10 QUESTIONS

Q1 What is Firewall and what problem in Networking does it solve? *Threat Model*

Q2 What are the core components or concepts in Firewall? *Architecture*

Q3 How does Firewall compare to its main alternatives? *Configuration*

Q4 How do you get started with Firewall for a new project? *Hardening*

Q5 What configuration options most affect Firewall's behavior in production? *SSO/IdP*

Q6 How does Firewall handle reliability and high availability? *Observability*

Q7 What observability does Firewall provide out of the box? *Lifecycle*

Q8 What are common performance bottlenecks in Firewall? *Compliance*

Q9 What security best practices apply when running Firewall? *Testing*

Q10 What mistakes do teams commonly make when adopting Firewall? *Tuning*

ANSWER KEY & EXPLANATORY SOLUTIONS

Comprehensive verified answers, best-practice configs, security controls & reference

VERIFIED SOLUTIONS

A1 Firewall is a tool or platform that
Mitigation

Firewall is a tool or platform that automates or simplifies a specific concern in the Networking domain, reducing manual effort and operational complexity for engineering teams.

A2 Firewall has key building blocks that work
Primitives

Firewall has key building blocks that work together: a configuration layer defines intent, a runtime layer enforces it, and an API or CLI layer allows operators to manage and observe the system.

A3 Firewall trades off simplicity against feature richness
Hardening

Firewall trades off simplicity against feature richness differently than its alternatives. Choose Firewall when its specific strengths performance, ecosystem, or ease of use align with your team's primary constraints.

A4 Install Firewall via its package manager or
Gotchas

Install Firewall via its package manager or binary release. Follow the quickstart to initialize a project, configure the minimal required settings, and run the default command to verify the setup works end-to-end.

A5 Production-critical settings typically include concurrency
Federation

Production-critical settings typically include concurrency limits, timeout values, retry policies, resource limits, and logging levels. Review the official production hardening guide before deploying.

A6 Firewall provides HA through leader election, replication,
Observability

Firewall provides HA through leader election, replication, or stateless horizontal scaling. Deploy at least two instances across availability zones and configure health checks for automatic failover.

A7 Firewall exposes metrics (Prometheus endpoint or built-in
Automation

Firewall exposes metrics (Prometheus endpoint or built-in dashboard), structured logs, and optionally distributed traces. Define SLOs on the key metrics and alert before users are affected.

A8 Performance bottlenecks typically stem from misconfigured
Governance

Performance bottlenecks typically stem from misconfigured connection pools, large payload sizes, insufficient worker threads, or missing caches. Profile with built-in diagnostics before optimizing.

A9 Run Firewall with the principle of least
Assessment

Run Firewall with the principle of least privilege, enable TLS for all communication, use a secrets manager for credentials, and keep the software patched to the latest stable release.

A10 Common pitfalls include skipping the documentation and
Optimization

Common pitfalls include skipping the documentation and learning the API by trial and error, using default configurations in production, lacking a runbook for operational issues, and not testing failover scenarios.
