EVENTBRIDGE PRACTICE SHEET - 10 CONCEPTUAL Q&A

10 conceptual Q&A Cloud

TOTAL: 10 QUESTIONS

Q1 What is EventBridge and what is its primary purpose in its cloud ecosystem? *Threat Model*

Q2 How does IAM work with EventBridge? *Architecture*

Q3 How do you monitor EventBridge in production? *Configuration*

Q4 How do you scale EventBridge to handle variable load? *Hardening*

Q5 How do you secure EventBridge in production? *SSO / IdP*

Q6 How do you manage configuration and secrets for EventBridge? *Observability*

Q7 What are the main cost drivers for EventBridge and how do you optimize them? *Lifecycle*

Q8 How do you implement high availability with EventBridge? *Compliance*

Q9 How does EventBridge integrate with a CI/CD pipeline? *Testing*

Q10 What are common pitfalls when first adopting EventBridge? *Tuning*

SOLUTIONS GUIDE
EventBridge

ANSWER KEY & EXPLANATORY SOLUTIONS

Comprehensive verified answers, best-practice configs, security controls & reference

VERIFIED SOLUTIONS

A1 EventBridge is a managed cloud service that

Mitigation

EventBridge is a managed cloud service that handles a specific infrastructure concern (compute, storage, messaging, AI). Using it shifts operational burden to the cloud provider while you focus on application logic.

A2 Access to EventBridge is controlled via IAM

Primitives

Access to EventBridge is controlled via IAM roles and policies. Attach the minimum required permissions to a service account or role. Avoid long-lived access keys; use instance roles or Workload Identity Federation instead.

A3 EventBridge emits metrics to the cloud provider's

Hardening

EventBridge emits metrics to the cloud provider's monitoring service (CloudWatch, Cloud Monitoring, Azure Monitor). Set alerts on key metrics (error rate, latency, capacity). Use distributed tracing to correlate across services.

A4 EventBridge supports auto-scaling policies based on CPU,

Gotchas

EventBridge supports auto-scaling policies based on CPU, queue depth, or custom metrics. Set minimum and maximum capacity. Horizontal scaling (more instances) is generally preferred over vertical for cloud workloads.

A5 Place EventBridge in a private subnet with

Federation

Place EventBridge in a private subnet with no public endpoint where possible. Use VPC security groups or firewall rules to allow only required traffic. Encrypt data at rest and in transit. Rotate credentials regularly.

A6 Store sensitive values in a managed secret

Observability

Store sensitive values in a managed secret store (AWS Secrets Manager, GCP Secret Manager, Azure Key Vault). Inject secrets as environment variables at runtime, never bake them into container images or source code.

A7 Cost in EventBridge typically comes from compute

Automation

Cost in EventBridge typically comes from compute hours, data transfer, storage, and request counts. Right-size instances, use reserved capacity for steady-state workloads, and enable lifecycle policies to expire old data.

A8 Deploy EventBridge across multiple availability zones. Use

Governance

Deploy EventBridge across multiple availability zones. Use managed replicas or active-active configurations. Implement health checks and automatic failover. Test resilience regularly with chaos engineering or failover drills.

A9 CI/CD pipelines use the cloud CLI or

Assessment

CI/CD pipelines use the cloud CLI or SDK to deploy updates to EventBridge after tests pass. Infrastructure-as-code (Terraform, CDK) defines EventBridge configuration as version-controlled code deployed via the pipeline.

A10 Common mistakes include misconfigured IAM policies (too

Optimization

Common mistakes include misconfigured IAM policies (too permissive), no cost alerting, deploying only in one availability zone, and missing backups. Read the service SLA carefully to understand what the cloud provider guarantees.
