ANSWER KEY & EXPLANATORY SOLUTIONS

Comprehensive verified answers, best-practice configs, security controls & reference

VERIFIED SOLUTIONS

A1 Adobe Experience Manager is a tool or

Mitigation

Adobe Experience Manager is a tool or platform that automates or simplifies a specific concern in the Content Management domain, reducing manual effort and operational complexity for engineering teams.

A6 Adobe Experience Manager provides HA through leader

availability

Adobe Experience Manager provides HA through leader election, replication, or stateless horizontal scaling. Deploy at least two instances across availability zones and configure health checks for automatic failover.

A2 Adobe Experience Manager has key building blocks

Primitives

Adobe Experience Manager has key building blocks that work together: a configuration layer defines intent, a runtime layer enforces it, and an API or CLI layer allows operators to manage and observe the system.

A7 Adobe Experience Manager exposes metrics (Prometheus)

monitoring

Adobe Experience Manager exposes metrics (Prometheus endpoint or built-in dashboard), structured logs, and optionally distributed traces. Define SLOs on the key metrics and alert before users are affected.

A3 Adobe Experience Manager trades off simplicity against

hardening

Adobe Experience Manager trades off simplicity against feature richness differently than its alternatives. Choose Adobe Experience Manager when its specific strengths performance, ecosystem, or ease of use align with your team's primary constraints.

A8 Performance bottlenecks typically stem from misconfigured

performance

Performance bottlenecks typically stem from misconfigured connection pools, large payload sizes, insufficient worker threads, or missing caches. Profile with built-in diagnostics before optimizing.

A4 Install Adobe Experience Manager via its package

Gotchas

Install Adobe Experience Manager via its package manager or binary release. Follow the quickstart to initialize a project, configure the minimal required settings, and run the default command to verify the setup works end-to-end.

A9 Run Adobe Experience Manager with the principle

Assessment

Run Adobe Experience Manager with the principle of least privilege, enable TLS for all communication, use a secrets manager for credentials, and keep the software patched to the latest stable release.

A5 Production-critical settings typically include concurrency

configuration

Production-critical settings typically include concurrency limits, timeout values, retry policies, resource limits, and logging levels. Review the official production hardening guide before deploying.

A10 Common pitfalls include skipping the documentation and

documentation

Common pitfalls include skipping the documentation and learning the API by trial and error, using default configurations in production, lacking a runbook for operational issues, and not testing failover scenarios.
