

Name: _____

Date: _____

STATES OF MATTER

Solve the following problems. Write your answer on the line.

Score: _____ / 20

Grade 5 | Science | Sheet 1

1) Matter has mass and occupies _____	2) The three states of matter are _____	3) Solids have definite shape and _____	4) Liquids have definite _____ but no definite _____
5) Gases have no definite shape or _____	6) Melting is change from solid to _____	7) Freezing is change from liquid to _____	8) Evaporation is change from liquid to _____
9) Condensation is change from gas to _____	10) Sublimation is change from solid to _____	11) A mixture can be _____ by physical means	12) A compound has a fixed _____ composition
13) Elements cannot be broken down by _____	14) Atoms combine to form _____	15) Mass per unit volume is called _____	16) Density = mass / _____
17) Ice melts at _____ degrees Celsius	18) Water boils at _____ degrees Celsius	19) Physical change does NOT _____	20) Chemical change forms a new _____

Name: _____

Date: _____

ANSWER KEY

States of Matter -- Solutions

Grade 5 | Science | Sheet 1

1) Matter has mass and occupies space	2) The three states of matter are gas	3) Solids have definite shape and volume	4) Liquids have definite volume but no definite shape
5) Gases have no definite shape volume	6) Melting is change from solid to liquid	7) Freezing is change from liquid to solid	8) Evaporation is change from liquid to gas
9) Condensation is change from gas to liquid	10) Sublimation is change from solid to gas	11) Matter can be separated by physical methods	12) A compound has a fixed chemical composition
13) Elements cannot be broken into simpler substances	14) Atoms combine to form molecules	15) Mass per unit volume is called density	16) Density = mass / volume
17) Ice melts at 0 degrees Celsius	18) Water boils at 100 degrees Celsius	19) Physical change does NOT form a new substance	20) Chemical change forms a new substance
