## PHYSICAL AND CHEMICAL CHANGES

Solve the following problems. Write your answer on the line.

Score: \_\_\_\_\_ / 20

Grade 7 | Science | Sheet 1

|                                                                |                                                                         |                                                  |                                                            |
|----------------------------------------------------------------|-------------------------------------------------------------------------|--------------------------------------------------|------------------------------------------------------------|
| 1) Science is the systematic study of the natural world. _____ | 2) Hypothesis word. _____ explanation. _____                            | 3) The independent variable is _____             | 4) The dependent variable is _____ in an experiment. _____ |
| 5) A controlled variable is kept _____                         | 6) Observations should be _____                                         | 7) The conclusion is based on _____              | 8) Peer review ensures scientific _____.                   |
| 9) SI system is used for _____ measurement. _____              | 10) The cell is the basic unit of _____                                 | 11) Cells were discovered by Robert Brown. _____ | 12) DNA is found in the _____.                             |
| 13) Mitochondria is the _____ of the cell. _____               | 14) Cell membrane controls what _____ enters and leaves the cell. _____ | 15) Plant cells have a _____ wall. _____         | 16) Chloroplasts are found in _____ cells. _____           |
| 17) Nucleus controls cell _____.                               | 18) Unicellular organisms have _____                                    | 19) Multicellular organisms have _____           | 20) Bacteria are _____ organisms. _____                    |

## ANSWER KEY

### Physical and Chemical Changes -- Solutions

Grade 7 | Science | Sheet 1

|                                                                 |                                                               |                                                      |                                                                |
|-----------------------------------------------------------------|---------------------------------------------------------------|------------------------------------------------------|----------------------------------------------------------------|
| 1) Science is the systematic study of the <u>natural</u> world. | 2) A hypothesis is a <u>testable</u> explanation.             | 3) The independent variable is <u>changed</u> .      | 4) The dependent variable is <u>measured</u> in an experiment. |
| 5) A controlled variable is kept <u>constant</u> .              | 6) Observations should be <u>accurate</u> .                   | 7) The conclusion is based on <u>data/evidence</u> . | 8) Peer review ensures scientific <u>accuracy/validity</u> .   |
| 9) SI system is used for <u>standard</u> measurements.          | 10) The cell is the basic unit of <u>life</u> .               | 11) Cells were discovered by Robert <u>Hooke</u> .   | 12) DNA is found in the <u>nucleus</u> .                       |
| 13) Mitochondria is the <u>powerhouse</u> of the cell.          | 14) Cell membrane controls what <u>enters/exits</u> the cell. | 15) Plant cells have a <u>cell</u> wall.             | 16) Chloroplasts are found in <u>plant</u> cells.              |
| 17) Nucleus controls cell <u>activities</u> .                   | 18) Unicellular organisms have <u>one</u> cell.               | 19) Multicellular organisms have <u>many</u> cells.  | 20) Bacteria are <u>prokaryotic</u> organisms.                 |
