## LIGHT

Solve the following problems. Write your answer on the line.

Score: \_\_\_\_\_ / 20 Sheet 3 of 4

|                                                             |                                                              |
|-------------------------------------------------------------|--------------------------------------------------------------|
| 1) Optical fibers use ____.                                 | 2) Solar eclipse occurs when ____ blocks sunlight.           |
| 3) Electromagnetic spectrum includes visible light and _... | 4) Umbra is the complete ____ region.                        |
| 5) White light is a ____ of all colors.                     | 6) Plane mirror forms a ____ image.                          |
| 7) Primary colors of light are red, green, and ____.        | 8) Transparent objects allow light to ____.                  |
| 9) The colors of the visible spectrum: VIBGYOR stands ...   | 10) Penumbra is the partial ____.                            |
| 11) Photon is a particle of ____.                           | 12) Angle of incidence = angle of ____.                      |
| 13) Concave lens diverges (spreads apart) ____.             | 14) Translucent objects allow ____ light to pass.            |
| 15) A prism splits light into ____.                         | 16) Virtual image cannot be formed on ____.                  |
| 17) Reflection follows the law of ____.                     | 18) Total internal reflection occurs when angle exceeds _... |
| 19) Convex lens converges (brings together) ____.           | 20) Opaque objects do not allow light to ____.               |
