## LIGHT

Solve the following problems. Write your answer on the line.

Score: \_\_\_\_\_ / 20 Sheet 1 of 4

|                                                                        |                                                                     |
|------------------------------------------------------------------------|---------------------------------------------------------------------|
| 1) Primary colors of light are red, green, and ____.<br>_____          | 2) Refraction is bending of light when it changes ____.<br>_____    |
| 3) Hyperopia (long-sightedness) is corrected by ____ lens.<br>_____    | 4) Angle of incidence = angle of ____.<br>_____                     |
| 5) Translucent objects allow ____ light to pass.<br>_____              | 6) Luminescent materials glow ____.<br>_____                        |
| 7) Human eye has a ____ lens.<br>_____                                 | 8) Penumbra is the partial ____.<br>_____                           |
| 9) Light travels in ____ lines.<br>_____                               | 10) A mirror reflects ____.<br>_____                                |
| 11) Plane mirror forms a ____ image.<br>_____                          | 12) Photon is a particle of ____.<br>_____                          |
| 13) Concave lens diverges (spreads apart) ____.<br>_____               | 14) Umbra is the complete ____ region.<br>_____                     |
| 15) Electromagnetic spectrum includes visible light and ____.<br>_____ | 16) Speed of light is ____ m/s (approx).<br>_____                   |
| 17) Solar eclipse occurs when ____ blocks sunlight.<br>_____           | 18) The colors of the visible spectrum: VIBGYOR stands ...<br>_____ |
| 19) Retina converts light into ____.<br>_____                          | 20) Opaque objects do not allow light to ____.<br>_____             |
